

scim-chewing 0.2.0 is released

Author: Cougar Liu<liucougar@scim-im.org>

Chewing core team released latest libchewing 0.2.6 and scim-chewing 0.2.0.

What's New in SCIM-chewing 0.2.0:

- User-friendly SetupUI
- Add functionality to show phrase interval using fonts decorated by underline, caret by highlight fonts, and Zuin symbol after the specific caret.
- Support experimental feature -- HanYu PinYing Keyboard layout.
- Settings-reload mechanism.

What's New in libchewing 0.2.6:

- Experimental feature -- HanYu PinYing Keyboard layout.
- Proper \$HOME env handling.
- SegFault workaround after libtabe's tsi.src merge.
- Add the facility to input symbols.
