

New IMEngin bring SCIM to python world

Author: Cougar Liu<liucougar@scim-im.org>

Thanks to shawn.p.huang, a python wrapper for SCIM is available now which is called [scim-python](#). With the help of this binding, besides C++, it is now possible to write your input method in python.

In addition to being a python binding, scim-python also provides a Pinyin IMEngine and an English spell checking IMEngine.

[Fun Input Toy for Linux](#) is another IMEngine for SCIM written in python which provides both Pinyin and Wubi.
