

# skim 1.3.0/scim-qtim 0.9.0 are released

Author: Cougar Liu<liucougar@scim-im.org>

The latest development branch of skim, version 1.3.0, is just released, along with the scim 1.3.0 compatible scim-qtim 0.9.0. skim 1.3.0 introduces a lot of new exciting features which you have never seen in other \*nix input method platforms (AFAICT). Everyone is highly encouraged to try out this version and bug reports/feedbacks are more than welcomed.

The new features I'd like to highlight here is the most significant ones:

- Main Window Dockable into Panel (only works with kicker) • transparent Window support • Direction support in Main Window

Several screenshots were updated to reflect the latest version, please have a look at our [screenshots collection](#) while you are compiling the new release ;)

Other items in the skim ChangeLog since 1.2.x includes:

- new: reworked Always show option of Main Window • new: three more modifier keys support (meta/hyper/super) and a config options to customize modifiers • new: filter setup dialog for the filter mechanism (new to libscim 1.3.0) • improvement: refined configure dialog to be more user friendly, re-structured the hierachy and new icons • improvement: do not display the border of the next/previous buttons; hide next/previous button when disabled (thanks to cjacker for advice) • improvement: smaller buttons in main toolbar which just use as little space as possible • improvement: String layout in Input Window • new: SCIM Setup can be added to the Main Toolbar

Please download this release in [usual place](#).
