

scim-tables 0.5.3 has been released.

Author: James Su<james.su@gmail.com>

It's a bugfix version, which fixed some small but serious bugs.

Changes since 0.5.2:

- A potential crash bug has been fixed. A bug in Nepali_Rom table has been fixed. A bug in configuration script, which cause wrong installation path of skim modules, has been fixed.

Distribution maintainers should update scim-tables packages to this version.
