

Next stable release forecast

Author: Cougar Liu<liucougar@scim-im.org>

It has been decided that scim 1.2.0 will be released before the next Monday and postpone all unimplemented features into future stable release. So please help test scim 1.1.3 extensively in these days and report any bugs you found in our [bug tracking system](#).

Everyone are recommended to migrate to scim 1.1.3 and have as thorough as possible test in as many distros/marchs as possible.
