

# scim 1.4.4 has been released.

Author: James Su<james.su@gmail.com>

It's mainly a bugfix version of stable 1.4 branch.

Changes since 1.4.3:

- Raw code IMEngine was enhanced to support switching among multiple encodings on the fly. Several bugs, which prevent scim from being built without X, were fixed. A bug, which can damage gtk panel sometime, was fixed. Lookup table page up/down buttons in gtk panel were moved to top (or left) of candidate list area, so that the position of these buttons won't be changed during updating lookup table.

Please go to download section to download the source tarball.

Have fun.
